

April 1, 2009

To Our Valued Customers:

We have fielded several recent questions regarding radioactive stainless steel products found in Germany. Please find the following link to an article on the internet regarding this: <http://agmetalmiller.com/2009/02/17/radioactive-stainless-steel-found-in-germany/#comments>

Amstek Metal does not buy stainless steel from any firm identified in the attached article. Amstek Metal purchases stainless steel from both domestic and foreign integrated mills, many of which have implemented gate mounted detection systems to test for radioactivity on incoming scrap and raw materials. They also check for radioactivity on all semi-finished and finished productions by suitable detection methods and approved devices.

Amstek Metal can certify that the materials provided you are free from Radioactive contamination.

Sincerely yours,

A handwritten signature in cursive script that reads "Clara Bal".
